

HARSHIT VANYA

Senior DevOps Engineer | Cloud Infrastructure & Automation

Bhopal, India | +91-9755106375 | harshitvanyagmer@gmail.com

linkedin.com/in/harshit-vanya | github.com/Harshit-Vanya

PROFESSIONAL SUMMARY

Senior DevOps Engineer with 6+ years of experience architecting, automating, and managing scalable cloud infrastructure across AWS and Azure environments. Proven track record in leading cross-functional engineering teams, designing CI/CD pipelines, implementing Infrastructure-as-Code with Ansible and Terraform, and building robust API integration platforms. Deep expertise in container orchestration (Kubernetes, Docker), Apache-based web infrastructure, and automated testing frameworks. Adept at translating business requirements into production-grade, highly available systems while mentoring engineers and driving DevOps culture adoption.

KEY SKILLS

Infrastructure & Automation: Ansible, Terraform, CloudFormation, Infrastructure-as-Code (IaC), Configuration Management, Server Provisioning

Cloud Platforms (AWS): EC2, ECS, EKS, Lambda, S3, SQS, SNS, CloudWatch, IAM, Route 53, VPC, RDS, ElastiCache, CodePipeline, CodeDeploy

Cloud Platforms (Azure): Azure Kubernetes Service (AKS), Azure DevOps, Azure Monitor, Azure Functions, ARM Templates

CI/CD & Build Systems: Jenkins, GitHub Actions, GitLab CI/CD, Azure DevOps Pipelines, ArgoCD, Spinnaker

Containers & Orchestration: Docker, Kubernetes, Helm, ECS Fargate, Docker Compose

Web & API Infrastructure: Apache HTTP Server, Nginx, Apache Kafka, REST APIs, SOAP APIs, API Gateway, Load Balancing

API Testing & Quality: Postman, Newman (CLI), pytest, Swagger/OpenAPI Validation, Contract Testing, JMeter, Locust

Monitoring & Observability: Prometheus, Grafana, ELK Stack, CloudWatch, Datadog, PagerDuty

Scripting & Development: Python, Bash, SQL, YAML, JSON, Go (basic)

Other: Git, Linux Administration, Networking (TCP/IP, DNS, SSL/TLS), Security Hardening, Agile/Scrum

WORK EXPERIENCE

Senior DevOps Engineer / DevOps Lead - CloudNexus DigiWeb Services Pvt. Ltd.

Mar 2024 - Present | Bhopal, India

- Led a team of 6 engineers, coordinating task delivery, conducting code reviews, and providing technical mentorship across multiple client engagements in Agile sprints.
- Architected and maintained CI/CD pipelines using Jenkins, GitHub Actions, and Azure DevOps - reducing deployment frequency from bi-weekly to multiple daily releases with zero-downtime deployments.
- Designed and implemented Infrastructure-as-Code (IaC) using Ansible (50+ playbooks) and Terraform to automate provisioning of AWS EC2, EKS clusters, RDS instances, and VPC configurations across 3 environments.
- Deployed and managed Apache HTTP Server clusters with mod_proxy and mod_security for a GEICO enterprise client, handling 10K+ concurrent connections with automated SSL certificate rotation.
- Built an end-to-end API testing pipeline using Postman/Newman integrated into CI/CD, validating REST and SOAP endpoints with contract testing, achieving 95%+ API test coverage before production deployments.
- Engineered an event-driven data validation platform on AWS (Lambda + SQS + S3), processing 500K+ daily events with automated retry/dead-letter queue patterns and CloudWatch alerting.
- Designed and deployed containerized microservices on Azure Kubernetes Service (AKS) with Helm charts, implementing horizontal pod autoscaling, rolling updates, and automated rollback strategies.
- Implemented centralized logging and monitoring using ELK Stack and Prometheus/Grafana, reducing MTTD by 60% and MTTR by 45%.
- Automated server configuration and application deployments using Ansible roles and Galaxy modules, eliminating manual SSH-based deployments and reducing provisioning time from hours to minutes.
- Established API governance standards and automated API testing workflows (schema validation, load testing with JMeter, security scanning with OWASP ZAP) across the organization.

DevOps Engineer - CloudNexus DigiWeb Services Pvt. Ltd.

Sep 2022 - Feb 2024 | Bhopal, India

- Built and maintained CI/CD pipelines for 12+ microservices using Jenkins and GitLab CI, integrating automated testing, Docker image builds, and Kubernetes deployments.
- Managed AWS infrastructure including EC2 fleets, Auto Scaling Groups, Application Load Balancers, and RDS clusters serving production workloads for enterprise clients.
- Configured and optimized Apache web servers and reverse proxies for high-traffic applications, implementing caching strategies and security hardening (mod_security, rate limiting).
- Developed Ansible playbooks for automated patching, compliance checks, and application deployment across 100+ Linux servers, reducing manual effort by 80%.
- Created comprehensive API testing suites using Postman collections and Newman CLI, integrated into pre-deployment gates in CI/CD pipelines.
- Implemented infrastructure monitoring with Prometheus, Grafana, and CloudWatch dashboards; configured alerting rules and on-call rotation with PagerDuty.
- Containerized legacy monolithic applications into Docker-based microservices and orchestrated deployments on ECS Fargate and EKS.
- Automated DNS management, SSL provisioning (Let's Encrypt/ACM), and CDN configuration for client-facing applications.

Junior DevOps Engineer - CloudNexus DigiWeb Services Pvt. Ltd.

Mar 2021 - Aug 2022 | Bhopal, India

- Supported infrastructure provisioning and configuration management using Ansible and AWS CloudFormation templates.
- Maintained Jenkins pipelines, troubleshoot build failures, and implemented automated artifact publishing to S3 and ECR.
- Assisted in migrating on-premise workloads to AWS, including network configuration (VPC, subnets, security groups) and database migration (RDS).
- Wrote Bash and Python scripts for log rotation, backup automation, health checks, and deployment orchestration.
- Configured Apache virtual hosts, SSL termination, and URL rewriting for multi-tenant web applications.
- Performed API testing and validation using Postman during integration testing phases, documenting API contracts and edge cases.

Software Engineering Intern - TechDrive Solutions

Jun 2020 - Feb 2021 | Bhopal, India

- Developed RESTful APIs using Python (Flask/FastAPI) with comprehensive unit and integration test coverage.
- Participated in CI/CD pipeline setup using GitHub Actions for automated testing and deployment to AWS EC2.
- Gained foundational experience in Linux server administration, Docker containerization, and cloud-native architecture.

PROJECTS

Enterprise Infrastructure Automation Platform - Ansible + AWS + Terraform (8 Months)

- Designed a comprehensive infrastructure automation platform using Ansible (70+ roles) and Terraform modules to manage multi-account AWS environments for enterprise clients.
- Automated end-to-end server provisioning, application deployment, security hardening, and compliance auditing across 200+ EC2 instances.
- Implemented dynamic inventory management with AWS EC2 plugin, enabling automatic discovery and configuration of new instances.
- Built custom Ansible modules for proprietary API integrations, reducing onboarding time for new services from days to hours.

High-Availability API Gateway & Testing Framework - AWS + Apache + CI/CD (6 Months)

- Architected a highly available API gateway using Apache HTTP Server with mod_proxy_balancer, handling 50K+ requests/minute across multiple backend microservices.
- Built a comprehensive API testing framework using Postman/Newman, pytest, and custom Python validators - executing 2,000+ test cases per deployment cycle.
- Implemented contract testing (consumer-driven) using Pact framework to ensure API backward compatibility across 15+ microservices.
- Deployed the platform on AWS ECS with Auto Scaling, Application Load Balancer, and Route 53 health checks for multi-region failover.

Real-Time Infrastructure Monitoring & Incident Response Platform (5 Months)

- Built a real-time monitoring platform using Prometheus, Grafana, and ELK Stack to observe 100+ services across AWS and on-premise infrastructure.
- Streamed infrastructure metrics and application logs through Apache Kafka into Elasticsearch for centralized analysis and alerting.
- Automated incident response workflows using Ansible Tower (AWX) for self-healing actions (service restart, scaling, failover).
- Integrated with PagerDuty and Slack for intelligent alert routing and escalation policies.

Cloud Migration & Containerization - On-Premise to AWS EKS (6 Months)

- Led migration of 8 legacy applications from on-premise servers to AWS EKS, including Dockerization, Helm chart creation, and CI/CD pipeline setup.
- Implemented blue-green and canary deployment strategies using ArgoCD and Istio service mesh.
- Designed network architecture (VPC, subnets, NACLs, security groups) and IAM policies following least-privilege principles.
- Achieved 99.95% uptime SLA with automated failover, horizontal pod autoscaling, and cluster autoscaler configurations.

EDUCATION

B.Tech / B.E., Computer Science and Engineering (CSE)

Sagar Institute of Science Technology and Research, Bhopal - 2020 | Grade: 7.8/10

12th - Madhya Pradesh Board (English medium) - 2016 | Marks: 74%

10th - Madhya Pradesh Board (English medium) - 2014 | Marks: 89%

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified DevOps Engineer - Professional
- Red Hat Certified System Administrator (RHCSA)
- Certified Kubernetes Administrator (CKA)
- HashiCorp Certified: Terraform Associate

ACHIEVEMENTS & ADDITIONAL INFORMATION

- Leadership Recognition: Promoted from DevOps Engineer to DevOps Lead within 2 years for exceptional technical delivery, team mentorship, and client satisfaction.
- Infrastructure Scale: Managed AWS infrastructure supporting 500K+ daily API transactions and 99.9%+ uptime across production environments.
- Cost Optimization: Reduced AWS infrastructure costs by 35% through right-sizing, Reserved Instances, Spot Fleet adoption, and automated resource scheduling.
- Open Source: Active contributor to Ansible Galaxy community roles and Terraform provider modules.
- Languages: English, Hindi
